

Class Task

GUI

Event Listeners & Menu

1. Implement this interface and add a **Status Bar** at the bottom and a **Menu Bar** at the top.
2. Menu Bar should have **at least 1 Menu, 1 Menu Item and 1 sub Menu Item** under Menu Item.
3. As user performs an action on any of these controls, **an appropriate message** shows up on status bar.
4. Only **ONE (any)** event from each control is enough for this exercise.

For example:

- when user clicks on sub Menu Item a message on Status Bar says "Sub menu item is clicked"
- when user clicks on 'Name' text field, message says "Name textfield gained focus"
